## BEST products take on a New Dimension.

BEST Bricks & Pavers are the manufacturers of Australia's finest pavers.

A \$2 million investment in a state-of-the-art Italian technology commissioned in 1998 has enabled BEST to produce 400mm x 400mm and 500mm x 500mm large-format pavers that are lighter, thinner and vastly stronger than those of their rivals but cost no more.

The stunning New Dimension Range of pavers don't look like concrete pavers. They perfectly conceal their concrete composition and are identical to the natural stones they emulate. They blend beautifully into the environment with styles, textures and colours such as sandstone, limestone, slate, terracotta which are all available.

Fantastic other contemporary finishes such as polished concrete, riverstone pebble and shot-blast are also available.

Aside from the obvious aesthetic and design benefits of using the large-format New Dimension Range, technically they out-perform any other concrete paver on the market with regard to load bearing, abrasion and salt resistance. This has enabled New Dimension pavers to be used in high volume applications such as car parks and driveways, previously unheard of for large-format pavers.
