BEST conquers local market and brings on the nation.

BEST Bricks and Pavers have been manufacturing masonry pavers, bricks, blocks and retaining walls for domestic and commercial purposes since 1993.

BEST is situated 10 minutes north of the Adelaide CBD, on a 2.5 hectare site. 70 people are employed here throughout the departments of manufacturing, sales, sub-contract paving and administration.

BEST's complete product range is manufactured using cutting edge computerised production processes ensuring that BEST is Quality Endorsed to ISO 9002.

Having conquered the local market in SA, BEST now are exporting their products on a national level.

Much of BEST's success is due to the state-of-the-art Italian technology used in its new large-format paver & terrazzo plant, to which it has secured sole Australian rights.

BEST's Managing Director, Bob D'Ottavi, said the new plant mass produces large concrete New Dimension pavers of up to 500mm x 500mm that are lighter, thinner and vastly stronger than their rivals.

He states; "We have significant long-term sales & distribution agreements in place in Victoria, taking on and beating local Melbourne manufacturers even though we have an 800 kilometre handicap to overcome."

BEST's major clients include major international and national construction firms, councils, builders, architects, landscapers, architects, engineers, garden centres and the do-it-yourself market.

BEST Bricks and Pavers – Commitment to the Environment:

BEST Bricks and Pavers hold the environment as a high priority in the work place. They have eliminated waste, eliminated landfill and found a new way to save water by recycling the water used in producing its concrete pavers and terrazzo. Best has experienced many benefits from this: reduction in water consumption by an average of 4800 litres a day, closed loop recycling of water and sludge, a \$11,000 saving a month in landfill costs, clean production which eliminates all waste, and a healthier environment.
